## DOVETAIL INTRODUCTION

### **Welcome to Dovetail' documentation !**

**Dovetail** is an OPNFV Project.

This project intends to define and provide a set of OPNFV related validation criteria that will provide input for the evaluation of the use of OPNFV trademarks. The dovetail project will be executed with the guidance and oversight of the Compliance and Certification committee and work to secure the goals of the C&C committee for each release

This project intends to incrementally define qualification criteria that establish the foundations of how we are able to measure the ability to utilize the OPNFV platform, how the platform itself should behave, and how applications may be deployed on the platform.
