OPNFV BRAHMAPUTRA RELEASE NOTE FOR FUNCTEST

1.1 Abstract

This document describes the release note of Functest project.

1.2 License

OPNFV Brahmaputra release note for Functest Docs (c) by Morgan Richomme (Orange)

OPNFV Brahmaputra release note for Functest Docs are licensed under a Creative Commons Attribution 4.0 International License. You should have received a copy of the license along with this. If not, see <http://creativecommons.org/licenses/by/4.0/>.

1.3 Version history

Date	Ver.	Author	Comment
2016-02-25	1.0.0	Morgan Richomme (Orange)	Functest for B release

1.4 OPNFV Brahmaputra Release

Functest deals with functional testing of the OPNFV solution. It includes test cases developed within the project and test cases developed in other OPNFV projects and other upstream communities.

The internal test cases are:

- vPing ssh
- vPing userdata
- Tempest
- Rally
- vIMS
- ODL

The OPNFV projects integrated into Functest framework for automation are:

- Promise

- Doctor
- ONOSFW

1.5 Release Data

Project	functest
Repo/tag	brahmaputra.1.0
Release designation	Brahmaputra base release
Release date	February 26 2016
Purpose of the delivery	Brahmaputra base release

1.6 Deliverables

1.6.1 Software

- The Functest Docker image

1.6.2 Documents

- Installation/configuration guide
- User Guide
- Developer Guide
- Test results per scenario

1.7 Version change

1.7.1 Feature evolution

- dockerization of Functest
- renaming of vPing into vPing userdata
- Tempest update, use custom list of test cases
- Rally update, use global scenario
- Update jenkins logs
- support of the different scenarios

1.7.2 New features

- introduction of a new vPing test case vPing ssh
- introduction of vIMS test case
- support of Promise

- support of Doctor
- support of ONOSFW
- scenario management system
- creation of a Test collection API
- creation of the Test dashboard: <https://www.opnfv.org/opnfvtestgraphs/summary>
- creation of Functest dashboard: <http://testresults.opnfv.org/dashboard/>

1.8 Scenario Matrix

For Brahmaputra, Functest supports the following scenarios:

Scenario	Apex	Compass	Fuel	Joid
odl_12	X	X	X	X
onos		X		
nosdn		X	X	
ovs (dpdk)			X	

Functest defines the success criteria when having at least 4 consecutive successful runs of a given scenario from the Continuous Integration.

The success criteria is defined as follows:

- vPing SSH 100% OK
- vPing userdata 100% OK
- Tempest success rate > 90%
- Rally success rate > 90%
- ODL success rate = 100%
- ONOSFW success rate = 100%
- Promise success rate = 100%
- vIMS: deployment of the orchestrator and the vIMS VNF successful

Other scenarios are currently available but did not meet success criteria for the release but might be added in the incremental scenario update of the release.

1.8.1 Brahmaputra limitations

- Fuel and Apex Tempest success rate was below 90% but above 80%. Some of the error causes were identified (workers, lack of IP)

- vIMS failed in CI for joid/odl_12 scenario
- vPing userdata and vIMS excluded from onos scenario
- None of the odl_13 scenarios has been successful due to vPing ssh issue.
- joid/nosdn successful but the complete scenario not run 4 times in a row
- apex/nosdn never run (not a target scenario) but probably succesful

See known issues section for details

1.9 Test and installer/scenario dependencies

It is not always possible to run all the test cases on all the scenarios. The following table details the dependencies of the test cases per scenario.

Test cases	Apex	Compass	Fuel	Joid
vPing SSH	all	all	all	all
vPing userdata	all except ONOS	all except ONOS	all except ONOS	all except ONOS
Tempest	all	all	all	all
Rally	all	all	all	all
ODL	all ODL	all ODL	all ODL	all ODL
ONOS	ONOS	ONOS	ONOS	ONOS
Promise	no	no	all	all
vIMS	all except ONOS	all except ONOS	all except ONOS	all except ONOS
Doctor	all	no	no	no

1.10 Test results

Test results are available in:

- test results document: <http://artifacts.opnfv.org/funcstest/docs/results/index.html>
- jenkins logs on CI: <https://build.opnfv.org/ci/view/funcstest/>
- Test dashboards: <http://testresults.opnfv.org/dashboard>

1.10.1 Known issues

- nova metadata service not supported in ONOS:
 - it excludes vPing userdata and vIMS test cases
- Rally worker issues:
 - A workaround has been implemented to run Tempest test cases sequentially
 - It may explain why Tempest scenarios (mainly on apex) do not run the 210 tests
 - <https://bugs.launchpad.net/testrepository/+bug/1538941>
- IPv6 issues in tempest suite:
 - tempest.api.network.test_ports.PortsIPv6TestJSON.test_create_port_in_allowed_allocation_pools
 - Tempest code which doesn't reserve big enough allocation
 - <https://bugs.launchpad.net/tempest/+bug/1514457>
- Lack of IP addresses available lead to several errors in different test cases
- vIMS:
 - the VM needs to have access to OpenStack API.
 - Technical architecture may not allow this access (for security reasons)
 - Orchestrator can be deployed but the vIMS VNF cannot
 - That is the reason why it fails on joid/odl_12 scenario on Orange POD 2

1.11 Open JIRA tickets

JIRA	Description
FUNCTEST-139	prepare_env failed due to https://pypi.python.org/samples is not accessible
FUNCTEST-137	Tempest success rate below 90 on apex
FUNCTEST-136	Tempest success rate below 90 on fuel
FUNCTEST-135	vPing scenario failed in odl_13 scenario
FUNCTEST-124	odl test suite troubleshooting
