3.29 Detailed test results for joid-os-odl_l2-nofeature-ha . . . 295
3.30 VIM . . . 295
3.31 SDN Controller . . . 323
3.32 Feature tests . . . 324

CHAPTER

ONE

FUNCTEST TEST RESULT DOCUMENT OVERVIEW

Functest project is described in Functest user guide. The user guide details the different test cases as well as the possible errors. A developer guide and a configuration guide are also available.

Functest is run systematically at the end of an OPNFV fresh installation. All the runnable tests are run sequentially. The installer and the scenario are considered to evaluate whether the test case can be run or not. That is why all the number of test cases may vary from 1 installer to another and from 1 scenario to another.

The list of scenario supported by installer can be described as follows:

Scenario	Apex	Compass	Fuel	Joid
odl_l2	X	X	X	X
onos		X		
nosdn		X	X	
ovs (dpdk)			X	

The matrix below details the Functest runnable tests versus the installer and the scenario:

Test cases	Apex	Compass	Fuel	Joid
vPing SSH	all	all	all	all
vPing userdata	all except ONOS	all except ONOS	all except ONOS	all except ONOS
Tempest	all	all	all	all
Rally	all	all	all	all
ODL	all ODL	all ODL	all ODL	all ODL
ONOS	ONOS	ONOS	ONOS	ONOS
Promise	no	no	all	all
vIMS	all except ONOS	all except ONOS	all except ONOS	all except ONOS
Doctor	all	no	no	no

all means that the test case is run on all the scenarios related to the installer.

Functest results from continuous integration can be found in:

- jenkins logs: https://build.opnfv.org/ci/view/functest/
- artifacts http://artifacts.opnfv.org/, it includes the tempest logs and the

Rally html pages

CHAPTER

TWO

ADDITIONAL TEST RESULT ASSESTS AND INFORMATION

The Functest deals with 2 dashboards:

- The Test Dashboard provides an overview of all the projects
- The Functest Dashboard dedicated to Functest real-time test results
  - is used to provide a quick overview of the different testcases according to installer and scenario.

CHAPTER

THREE

RESULTS LISTED BY SCENARIO

The following sections describe the functest results as evaluated for the Brahmaputra release scenario validation runs. Each section describes the determined state of the specific scenario as deployed in the Brahmaputra release process.

To qualify for release the scenarios must have deployed and been successfully tested in four consecutive installations to establish stability of deployment and feature capability

3.1 Detailed test results for compass-os-nosdn-nofeature-ha

3.2 VIM

3.2.1 vping_ssh

```
