## Version history

Date	Ver.	Author	Comment
------	------	--------	---------

2015-06-03	1.0.0	Jonas Bjurel	Arno SR0 release
2015-09-28	1.1.3	Jonas Bjurel	Arno SR1 release

## Important notes

For the first OPNFV release (Arno), these notes introduce use of *OpenStack Fuel* <<https://wiki.openstack.org/wiki/Fuel>> for the deployment stage of the OPNFV continuous integration (CI) pipeline. The goal of the Arno release and this Fuel-based deployment process is to establish a foundational platform accelerating further development of the OPNFV infrastructure.

Carefully follow the installation-instructions and pay special attention to the pre-deploy script that needs to be run before deployment is started.

## Summary

For Arno SR1, the typical use of Fuel as an OpenStack installer is supplemented with OPNFV unique components such as [OpenDaylight](#) version Helium as well as OPNFV-unique configurations.

This Arno artefact provides Fuel as the deployment stage tool in the OPNFV CI pipeline including:

- Documentation built by Jenkins - this document (release notes) - installation instructions - build-instructions
- The Arno Fuel installer image (.iso) built by Jenkins
- Automated deployment of Arno with running on bare metal or a nested hypervisor environment (KVM)
- Automated validation of the Arno deployment

## Release Data

<b>Project</b>	genesis/bgs
<b>Repo/tag</b>	genesis/arno.2015.2.0
<b>Release designation</b>	Arno Base Service release 1 (SR1)
<b>Release date</b>	2015-10-01
<b>Purpose of the delivery</b>	OPNFV Arno Base SR1 release

## Version change

### *Module version changes*

This is the second tracked release of genesis/fuel. It is based on following upstream versions:

- Fuel 6.1.0
- OpenStack Juno release
- OpenDaylight Litiium release

### *Document version changes*

This is the second tracked version of the fuel installer for OPNFV. It comes with the following documentation:

- OPNFV Installation instructions for Arno with Fuel as deployment tool
- OPNFV Release Notes for Arno use of Fuel as deployment tool

- OPNFV Build instructions for Arno with Fuel as deployment tool

## Reason for version

### *Feature additions*

JIRA REFERENCE	SLOGAN
JIRA: FUEL-4	Baselining Fuel 6.0.1 for OPNFV
JIRA: FUEL-17	Integration of OpenDaylight

### *Bug corrections*

#### JIRA TICKETS:

JIRA REFERENCE	SLOGAN
JIRA: BGS-57	The OpenDaylight Helium release is not fully functional and the resulting Fuel integration is not able to cope with the deficiencies. It is therefore not recommended to enable this option. A functional integration of ODL version: Lithium is expected to be available in an upcoming service release.

## Deliverables

### *Software deliverables*

Fuel-based installer iso file <arno.2015.2.0.fuel.iso>

### *Documentation deliverables*

- OPNFV Installation instructions for Arno release with the Fuel deployment tool - ver. 1.1.0
- OPNFV Build instructions for Arno release with the Fuel deployment tool - ver. 1.1.0
- OPNFV Release Note for Arno release with the Fuel deployment tool - ver. 1.1.3 (this document)

## Known Limitations, Issues and Workarounds

### System Limitations

**Max number of blades:** 1 Fuel master, 3 Controllers, 20 Compute blades

**Min number of blades:** 1 Fuel master, 1 Controller, 1 Compute blade

**Storage:** Ceph is the only supported storage configuration.

**Max number of networks:** 3800 (Needs special switch config.)

### Known issues

#### JIRA TICKETS:

JIRA REFERENCE	SLOGAN
----------------	--------

JIRA: FUEL-43	VMs not accessible through SSH due to VXLAN 50 Byte overhead and lack of proper MTU value setting on virtual ethernet devices
JIRA: FUEL-44	Centos 6.5 option has not been enough verified

## Workarounds

See JIRA: *FUEL-43* <<https://jira.opnfv.org/browse/FUEL-43>>

## Test Result

Arno SR1 release with the Fuel deployment tool has undergone QA test runs with the following results: [https://wiki.opnfv.org/arno\\_sr1\\_result\\_page?rev=1443626728](https://wiki.opnfv.org/arno_sr1_result_page?rev=1443626728)
