Introduction

This document describes how to setup OPNFV from a foreman Virtual Machine on an Ubuntu server. Before starting, you should have an Ubuntu 14.04 LTS server already installed.

Here is the manual workflow that you will have to perform:

- Install
- Manually prepare configuration files from templates.

Here is the current workflow of the automated installation:

- Dependencies installation (such as libvirt, impitools, etc.)
- Foreman Virtual Machine creation
- to be completed
