

Promise Installation and Configuration Guide

Release 2015.1.1 (11f0e71)

OPNFV

August 17, 2016

CONTENTS

1	Promise Feature Configuration Overview	1
1.1	Promise installation	1
1.2	Testing	1

PROMISE FEATURE CONFIGURATION OVERVIEW

1.1 Promise installation

Install nodejs, npm and promise

```
curl -sL https://deb.nodesource.com/setup_4.x | sudo -E bash -
sudo apt-get install -y nodejs
sudo npm -g install npm@latest
git clone https://github.com/opnfv/promise.git
cd promise
npm install
```

Please note that the last command ‘npm install’ will install all needed dependencies for promise (including yangforge and mocha)

1.2 Testing

Please perform the following preparation steps:

1. Set OpenStack environment parameters properly (e.g. source openrc admin demo in DevStack)
2. Create OpenStack tenant (e.g. promise) and tenant user (e.g. promiser)
3. Create a flavor in Nova with 1 vCPU and 512 MB RAM
4. Create a private network, subnet and router in Neutron
5. Create an image in Glance

Once done, the promise test script can be invoked as follows (as a single line command):

```
NODE_ENV=mytest \  
OS_TENANT_NAME=promise \  
OS_USERNAME=promiser \  
OS_PASSWORD=<user password from Step 2> \  
OS_TEST_FLAVOR=<flavor ID from Step 3> \  
OS_TEST_NETWORK=<network ID from Step 4> \  
OS_TEST_IMAGE=<image ID from Step 5> \  
npm run -s test -- --reporter json > promise-results.json
```

The results of the tests will be stored in the promise-results.json file.

The results can also be seen in the console (“npm run -s test”)

All 33 tests passing?! Congratulations, promise has been successfully installed and configured.

```
allocation using reservation for immediate use
create-reservation
  ✓ should create reservation record (no start/end) without error (130ms)
  ✓ should update promise.reservations with a new entry
  ✓ should contain a new ResourceReservation record in the store
create-instance
  ✓ should create a new server in target provider (with reservation) without error (1189ms)
  ✓ should contain a new ResourceAllocation record in the store
  ✓ should be referenced in the reservation record
  ✓ should have high priority state
reservation for future use
create-reservation
  ✓ should create reservation record (for future) without error (276ms)
  ✓ should update promise.reservations with a new entry (81ms)
  ✓ should contain a new ResourceReservation record in the store
query-reservation
  ✓ should contain newly created future reservation (129ms)
update-reservation
  ✓ should modify existing reservation without error (244ms)
cancel-reservation
  ✓ should modify existing reservation without error (104ms)
  ✓ should no longer contain record of the deleted reservation
capacity planning
decrease-capacity
  ✓ should decrease available capacity from a provider in the future (101ms)
increase-capacity
  ✓ should increase available capacity from a provider in the future (104ms)
query-capacity
  ✓ should report available collections and utilizations (201ms)
reservation with conflict
create-reservation
  ✓ should fail to create immediate reservation record with proper error (233ms)
  ✓ should fail to create future reservation record with proper error (122ms)
cleanup test allocations
destroy-instance
  ✓ should successfully destroy all allocations (1462ms)

33 passing (7s)
```
